IC - A61F2/28 ; A61L27/00 ; C04B38/00
AB - J60142857 Bone cement compsn. comprises a calcined calcium phosphate cpd. (e.g. hydroxyapatite such as $\text{Ca}_5(\text{PO}_4)_3\text{OH}$, $\text{Ca}_4\text{O}(\text{PO}_4)_6(\text{OH})_2$, etc., calcined at 800-1450 deg.C) of a Ca/P atomic ratio of 1.30-1.80, having a grain size of 0.05-0.5 mm and porosity of 40-90%, with pores of dia. of 1-600 microns and with fine paths leading to the pores. The cpd. contains 10-200% of at least one of e.g. water, sodium chloride injection (or solution), blood and artificial blood-plasma.
- USE/ADVANTAGE - Compsn. has excellent compatibility with living tissue and adhesiveness to bone, joint, etc., prostheses of metals or ceramics. It also efficiently activates the osteoplastic cells, etc., and suppresses the intrusion of collagen fibre and other harmful objects.
